PROFESSIONAL SUMMARY

React Frontend Developer with around 3 years of professional software development experience, currently building energy monitoring dashboards in React and TypeScript. Specialises in data-dense interfaces: interactive Gantt, scatter, line and bar charts, Geographic Information System (GIS) maps, and frontends backed by GraphQL Application Programming Interfaces (APIs). Owns release candidate (RC) and production releases.

CORE SKILLS

Frontend: React, TypeScript, JavaScript, Next.js, HTML, CSS, SCSS, responsive layout

State and data: Redux, Zustand, TanStack Query, GraphQL, Representational State Transfer (REST) APIs

Data visualisation: Gantt, scatter, line and bar charts; Geographic Information System (GIS) maps

Testing: Vitest, Jest, React Testing Library, Cypress; unit, integration and End-to-End (E2E) tests

Backend and data: Kotlin (Quarkus), PostgreSQL, MySQL, MongoDB

Delivery: Git, Docker, Continuous Integration and Continuous Delivery (CI/CD), Agile and Scrum, code review

Strengths: Analytical problem solving, team leadership, clear cross-team communication

WORK EXPERIENCE

Frontend Developer — Energy Advice, Kaunas, Lithuania | Feb 2024 – Present

- Build and maintain energy monitoring dashboards in React and TypeScript used by over 500 users across more than 20 client companies to track energy consumption across their sites.
- Designed a reusable data visualisation library of more than 15 chart components — Gantt, scatter, line and bar — reused across dashboard views instead of one-off chart code.
- Developed Geographic Information System (GIS) map views for locating and inspecting metering devices.
- Integrated the frontend with Kotlin and Quarkus services over GraphQL, contributing backend changes where features required them.
- Reduced page load time and JavaScript bundle size through code splitting and render optimisation.
- Write unit, integration and End-to-End (E2E) tests with Vitest, Jest, React Testing Library and Cypress.
- Own release candidate (RC) and production frontend releases, shipping 3 to 4 verified releases per week.

Full Stack Developer Intern — Present Connection, Kaunas, Lithuania | Oct 2023 – Dec 2023

- Delivered features and resolved defects in Human Resources (HR) applications built with React and .NET, working to sprint commitments in an Agile team.
- Took tickets through the full cycle — implementation, code review and testing — alongside senior developers.

Shift Engineer — ACHEMA, Jonava, Lithuania | Feb 2015 – Feb 2024

Urea fertiliser production, held alongside part-time software studies and the developer roles above.

- Led a 20-person shift team accountable for product quality and continuous production output.
- Coordinated fault diagnosis and shift handover under time pressure, keeping production running through equipment failures.

EDUCATION

Master of Science in Chemical Engineering — Kaunas University of Technology | Graduated 2013

CERTIFICATIONS AND COURSES

The Rolling Scopes School — Node.js, Jun 2023 – Aug 2023; React, Mar 2023 – Jun 2023; Front-end, Feb 2022 – Aug 2022

Xplicity Academy, Aug 2023 — built an Artificial Intelligence (AI) image generator with Angular and C#

Devbridge Sourcery Academy for Developers, Oct 2022 – Dec 2022 — team project in React and Spring Boot

Code Academy — Full Stack JavaScript and Java Development, Nov 2021 – Aug 2022 (480 hours)

LANGUAGES

Lithuanian (native), English (B2, upper intermediate)
